

APB-200

WIRELESS PANIC BUTTON

APB—200 is a wireless panic button used to trigger a panic alarm or call for help. It can also be used to control various devices (e.g. automation or access control system devices). It is designed to work within a two–way wireless **ABAX 2** system.

- encrypted two-way radio communication in the 868 MHz frequency band (AES standard)
- diversification of transmission channels 4 channels allow automatic selection of one that guarantees transmission without interference with other signals in the 868 MHz frequency band
- remote button firmware update
- remote configuration
- ECO option enabling extension of battery life
- battery status check
- LED for easy button testing
- tamper protection against opening the enclosure and against detaching it from its mounting surface

APB-200 is controlled by:

- ACU-220/ACU-280 controller
- ARU-200 retransmitter
